The first version of AutoCAD, AutoCAD R17, was released on December 1, 1985 and was the first stand-alone desktop CAD program available for the PC. The program was initially sold for about \$1,900, and, by the time of its release, other types of software were being introduced at prices ranging from about \$800 to \$2,000. By comparison, CAD programs available in the 1980s typically cost as much as about \$50,000. AutoCAD's initial name was PathCAD, and it was a dedicated CAD application designed for CAD work on path and block

drafting. PathCAD was a more powerful version of a proprietary CAD package known as IMPACT (Improved Path and CAD Tool). Following the release of AutoCAD R17, AutoCAD R18 was released on October 28, 1986. In this release, the base price for AutoCAD was increased to \$4,200, and the application's name was changed to AutoCAD. AutoCAD R19 was released on April 25, 1987. The release was a major upgrade that contained new features such as command line editing, the ability to rotate, scale, and translate. AutoCAD R19 also included many new tools, including a tape measure. At the time of its release, AutoCAD R20 (now

known as AutoCAD LT) was one of the first commercially successful, widely used desktop PC applications. The program was introduced on October 6, 1988, and it cost \$3,995. AutoCAD LT was designed to be used as a stand-alone CAD package, but it could also be used with the AutoCAD product line, which was the first CAD program developed specifically for the PC. According to the company, the development of AutoCAD was motivated by the introduction of the first workstations in 1979, which allowed for the use of computers for the design, creation, and analysis of design documents. AutoCAD was

designed for the PC's graphical user interface (GUI) and the wide variety of available peripheral devices, such as graphics display monitors. The first release of AutoCAD was the development of AutoCAD version 1.1, which was released on November 11, 1982. At the time, AutoCAD was developed for a PC-like computer called the IBM PC, and it was the first CAD program designed for the PC.

introduced in 1986The relative
contribution of the right and left
posterior parietal cortices to visuo-
spatial attention. The role of the right
and left posterior parietal cortices
(rPPC and lPPC) in visuo-spatial
attention was examined. A classic

attentional task was used where subjects attended to (or disengaged from) a visually detectable, central, cued, and spatially predictable target, that appeared randomly among distractors. We found that task performance was strongly dependent on the relative contribution of rPPC and lPPC to the cueing of attention. However, overall performance was quite good and, for most parameters, it could be explained without the need for any attentional control. Moreover, task performance was found to be unaffected by spatial, perceptual, or motor factors, and by other cognitive parameters such as subjective ability.

Thus, the role of rPPC and lPPC in visuo-spatial attention was quite limited and hardly of central importance to the performance of this classic attentional task.

Q: How to fill int array with a char array? I'm trying to pass a char array to my function which I will then fill with ints using a for loop but I don't know how to get a char array from a string. It gives me an error when I try to pass a char array to the function.

```
#include <string.h>
#include <stdio.h>
void convert(char *, int *);
int main() { char text[50]; int textSize = 50; printf("Enter a text: "); gets(text); convert(text, textSize); }
void convert(char text[], int textSize) { for(int i = 0; i < textSize; i++)

Australian Prime Minister Malcolm Turnbull has agreed to a special one-off visit to the US to meet President Donald Trump in New York. Mr Turnbull said on Friday the meeting would be on the sidelines of the UN General Assembly and be a "really important" opportunity to discuss issues including trade and security. Australia was part of a group of countries opposed to Mr Trump's contentious travel ban. "I am looking forward to meeting President Trump in New York to be able to press the case for Australian exporters and to discuss

regional security, which is so important for Australia," Mr Turnbull told reporters. He has previously criticised Mr Trump's treatment of Muslim-majority countries and his plan for a border wall. Mr Turnbull was one of just nine world leaders invited to the White House to meet Mr Trump earlier this month. He has not been seen in public since announcing he would leave his post as head of the Liberal Party amid an infighting crisis. Despite the strained relationship between the Turnbull government and Mr Trump's White House, Mr Turnbull said it was still possible for the two to get along. "I am confident we can reach an

understanding," he said. "Obviously there are various points of difference, but I don't think they'll be fundamental." Mr Trump, meanwhile, has taken to Twitter to accuse Australia of "turning away" Mr Turnbull. "I do not know Malcolm Turnbull but have always found him to be very friendly and somewhat positive," Mr Trump wrote on Friday. "I have asked him to stop talking about the Liberal Party so he will probably do that."

Q: mysql insert to database using python I am trying to insert a value in my database using python. In my db I have a column that is not a primary key, and I want to insert a value in that column without

using a primary key. Here is the code that I am using to insert:

```
cursor.execute('insert into `sqlserver`.dbo.`colors` (Name, Red, Green, Blue) values (%s, %s, %s, %s)', (color_name, color_red, color_green, color_blue))
```

I have tried putting %s before every variable, and it isn't working. How can I insert a value in this column without a primary key? A: Your syntax is wrong, as demonstrated
