I want to sort the elements of a character array without a specific C++ library function, so I opted to go with qsort(). However, it looks like qsort() is not portable and thus I want to see if there is a comparable C++ implementation. I'm quite impressed with the quality of portable C++ and would like to code portable C++ if possible. Can anyone point me to the best possible portable C++ alternative to qsort()? A: You can use the Standard Library sort algorithm instead. A: There is also a Qt solution.
