1. G Data Antivirus is a powerful antivirus program that is currently the leading anti-malware application available in the market today. 2. G Data Backup is a useful tool that makes it possible to back up all data stored on your PC. 3. G Data Network Management is a powerful utility that makes it possible to manage network devices that are connected to your PC. Time ago, I've tried to find a way to restore the ability of write a png picture. On the web, you will find solutions that don't really work and solutions that could work but are very complicated to configure or use. Using Microsoft's own tools, I was able to find an easy way to restore the ability to write png pictures. You may be looking for an alternative to the default Mail App of your Windows OS. While there are plenty of applications available that try to do the same job, Microsoft's default application is the best and you should not waste your time by looking for anything else. On Windows 10, if you want to start the computer with a specific background image you can set the following parameters, this works also on Windows 8/8.1. Open your Command Prompt (or PowerShell in Windows 10) and type the following in one single line, the order is important! If you want to change the login screen background, then use the LSSetBackgroundImage command. If you want to change the background after the login, then use the LSSetLogonBackgroundImage command. LSSetBackgroundImage /S root\\cimv2\\Win32\_LogonBackgroundImage /U /i image.jpg This will change the background image. If you want to restore the original background, then use this command. LSSetLogonBackgroundImage /S root\\cimv2\\Win32\_LogonBackgroundImage /U /i image.jpg This will restore the original background image. Here's a fun way to monitor your computer's activity using the sound of the fan. Have you ever wondered how many computers your typical individual has connected to their network? And just how many of them are idle? Well, I can tell you that with this neat little program you can get some pretty neat information. It's one of my favorite pieces of free software. After installing, just launch it and start connecting your network devices
