DLTypes Free Download is a specialized Windows Registry Explorer

which offers a quick, simple, and safe way to manage, catalogue, and monitor the numerous registered file types in Windows. Registration is needed for this tool to function properly. While registration

with this tool is not required to use the standard Registry Explorer, please be aware that some of the uses for this application may require that you register it (A Back-Up function allows you to safely backup

Registry Values for files, file extensions, and file types in case you accidentally delete them from the Registry. The tool maintains a log of changes made to the Registry to quickly identify if a given file type has been

changed or edited in the past. The DLTypes Search function allows you to search the Registry for specific file extensions. The search results can be narrowed by typing a part of the extension in the search window.

By default, the search mode is set for all file extensions and you can either change it to a more specific match or clear it and start the search again. DLTypes works for all Windows based operating systems

including Windows XP, Windows Vista, Windows 7, and Windows 8. DLTypes is not an Explorer replacement and should be used for its intended purpose only. For complete and detailed instructions and

Frequently Asked Questions please refer to Download DLTypes and read the license agreement: Features: Product Info: Download the file below to register this tool on your computer. Open

Registry Editor, right click on Computer in the left panel and click Properties. In the left window of Computer Properties click on the registry key called HKEY_LOC AL_MACHINE\Softwar e\Licensee. On the right pane (window) a

screen will open. Click the button called Edit and enter your product key and press ENTER. 1. File Type: It has been programmed to recognize the following file types: .bmp - Bitmap File .wad - Microsoft

Windows Directory File .car - Microsoft Windows Directory File .chd - Microsoft Windows Directory File .mcd - Microsoft Windows Directory File .scr - Screen Scraper File .bat - Microsoft Windows Script File .cpp -

Microsoft C++ Code File .c - Microsoft C Code File .tmu - Tampermonkey Extension b7e8fdf5c8

DLTypes is an application to quickly catalogue and manage the many registered file types in Windows. DLTypes can handle file types that are found in the registry (which are

most file types, including filenames/extensions for executable and script files and in older versions even shortcuts) and extensions that are registered by Microsoft Corporation (which are mostly file

types made by other companies). Some file types have multiple extensions, and the different file types are identified by their number in the registry. If the file type is not known or if no registry number is present, the

extension is used instead as a tie-breaker. Finding the most recent version of a file type from your registry can be done easily with DLTypes. DLTypes can export or import the data in the registry, and the file

sizes for each extension can be viewed so you can evaluate the size of changes. After the selection has been made, modifying the default icon and associated actions as well as adding or removing file

extensions can be easily done. DLTypes automatically backs up Registry entries when deleting extensions or changing values and tracks changes made to registry. Also included is a fast search function to

find files based on
their extension or file
type. After the files
are found, many
functions are
available to make
testing the
associated actions
easy. Zip backup is
available for file
types. Icons can be

located or built easily by using the scan function. After the scan, create a favorite icon list by browsing and selecting the icons. Print functions are available for all file types and their associations. NOTE:

DLTypes is available
for both 64-bit and
32-bit, and the DX
(DirectX) Version
available in the 64-bit
version. The 32-bit
version contains
more features and
icon designs.
Download DLTypes
DLTypes is a new

program to catalogue and manage the many registered file types in Windows. DLTypes can handle file types that are found in the registry (which are most file types, including filenames/extensions for executable and

script files and in older versions even shortcuts) and extensions that are registered by Microsoft Corporation (which are mostly file types made by other companies). Some file types have multiple extensions,

and the different file types are identified by their number in the registry. If the file type is not known or if no registry number is present, the extension is used instead as a tie-breaker. Finding the most recent version

of a file type from your registry can be done easily with DLTypes. DLTypes can export

What's New In DLTypes?

The DLTypes application was developed to be a small tool that offers

a quick, simple, and safe way to manage, catalogue, and monitor the numerous registered file types in Windows. It should prove to be indispensable for system maintenance and troubleshooting for the advanced

home user, and informative and educational for the novice. Features include: Search for files based on their extension or file type Search for specific file types Create favorite list of icon Manage and

add/remove file types Re-register file types after deletion Detect invalid entries Add file types by browsing and selecting Backs up Registry entries when deleting extensions or changing values Tracks changes made

to registry. Also backups scheduled for every 30 days and each time when an extension is deleted. Comprehensive help available via simple to use menus and help. Zip backup available. Print functions available

for all file types.
Manage the Registry
values based on file
extension, file type,
or unregistered files.
Powerful, yet easy to
use, DLTypes offers
features that most
other Windows
applications do not.
The GUI is easy to

learn, user friendly, and well documented. Also, while the program requires no install, it can make registry changes that can not be done with a simple uninstall. File types are added easily by browsing in

the registry for any file extensions or browse the registry for any file types. New extensions can be registered by entering the extension and file type. Simple menus and a detailed help guide are included to

make it easy to perform the actions that can be done with DLTypes. Description: The DLTypes application was developed to be a small tool that offers a quick, simple, and safe way to manage, catalogue, and

monitor the numerous registered file types in Windows. It should prove to be indispensable for system maintenance and troubleshooting for the advanced home user, and informative and educational for the

novice. Features include: Search for files based on their extension or file type Search for specific file types Create favorite list of icon Manage and add/remove file types Re-register file types after deletion Detect

invalid entries Add file types by browsing and selecting Backs up Registry entries when deleting extensions or changing values Tracks changes made to registry. Also backups scheduled for every 30 days and

each time when an extension is deleted. Comprehensive help available
