The order, which is pending approval from the U.S. Air Force's Foreign Military Sales program, would allow the company to start to build the new aircraft in May 2011, Boeing officials said. "This order supports our government's mission to provide reliable, affordable and responsive airlift. As our nation's strategic airlift aircraft, the C-17 Globemaster III is the best aircraft for transporting light payloads and troops to military operations around the world," said Pat Shanahan, president, Boeing Defence, Space & Security. The Boeing C-17 has a similar internal structure to the previous generation of C-17s. It is able to transport 7,000 pounds of cargo or 2,000 troops, according to Boeing's Web site. The new C-17 will be equipped with Pratt & Whitney's new PW1000G turbofan engines that will allow the aircraft to operate from airports with runways less than 15,000 feet long. The C-17 has also been exported to 64 countries and is the only strategic airlifter in the world that is constructed with 50 percent U.S. components. The first C-17 is scheduled to fly in May 2004, and the last is expected to leave the factory in August 2012.
